### Wireless Troubleshooting:

*Interference can come from other electronics and appliances that aren't connected to your game system, but use the same 2.4GHz frequencies to communicate. Wifi routers, cordless phones, bluetooth devices, baby monitors and wireless video security systems are some examples.*

*If you find that you have a poor or inconsistent wireless performance in your room, see if any of these devices are nearby. In most cases, simply moving your wireless device farther away from the source of interference is enough to solve the problem. Turning off wireless capabilities on nearby devices can also help troubleshoot which to consider relocating for better wireless performance.*
